

SPIRE

Post date:

04/04/2013 - 00:00

The 9th European Congress of Chemical Engineering and the 2nd European Congress of Applied Biotechnology will take place in The Hague on April 21-25, 2013.

Under the slogan 'Shaping a Sustainable Future', the congress will bring together researchers, scientists, engineers, policy makers, industrial professionals and managers, entrepreneurs and students to exchange and share their experiences, new ideas, innovations and research results on all aspects of chemical engineering, applied biotechnology and process intensification.

A diverse and engaging 5-day programme creates a forum to discuss new ideas, address practical challenges, find solutions and allow new partnerships to flourish. The organisers expect around 2300 people including 700 talented PhD & MSc students. Each day starts with a plenary speaker and keynote speakers who will share their vision on innovation and sustainability in the process industry. In the afternoon, scientific sessions are scheduled parallel to the innovation track.

During this 5 days Congress, SPIRE will be invited to present its own innovation ideas that will boost resource and energy efficiency within process industries and ensure Europe competitiveness. In collaboration with 7 sectors, the chemical industry wants to achieve SPIRE objectives as well as promoting a 'sustainable future' in and for Europe.
