

Projects

Post date:

31/08/2023 - 13:07

In the framework of the INCITE project, the consortium is pleased to invite you to the following workshop: Unlocking the potential of enzymatic process technologies in industrial chemical production: case of the INCITE project. This open event will be the opportunity to engage with our experts, enzyme specialists and many other bioeconomy stakeholders. It will take place:

- In person on Friday, 29th September (during IFIB 2023) at Innovation Center di Fondazione CR Firenze (Italy). Secure your spot: [INCITE project event](#)
- You will not be in Florence? You can take part in it remotely. Please register [here](#) and you will receive the link to access the room 4 days before the event.

The INCITE project is funded by the EU as part of the flagship objectives of SPIRE 2030. Its success relies on the effective industrial implementation of intensified enzymatic process technologies in the commodity and speciality chemicals industry in Europe and at a larger scale. The project aims to develop novel upstream and downstream processing technologies to make

them available to the industry. These processes are valorised through an agrochemical and an oleochemical tracks.
