MEASURE

Full Title: Metrics for Sustainability Assessment in European Process Industries

Aim:

The European project MEASURE stands for harmonised cross-sectorial sustainability assessment in the European process industries.

Concept:

The project team will focus on the following main topics: - Critical points in current practice due to interfaces between sectors and/or along the supply chain, - From single sector to cross-sectorial supply chain [data] management by full Life Cycle Sustainability assessment on the example of the industrial sectors chemistry & consumer goods, steel & automotive as well as waste treatment, and - From research & development to full scale production using the right tools. The outcome will be a roadmap providing recommendations for standards as well as best-practice methods and tools for life cycle based evaluation approaches in process industries and sustainable process design.

Start date:

01/01/2015

End date:

31/03/2016
